

WIDGETS

currently selected widget moves into the middle and will be enlarged.

WIDGET EXAMPLE

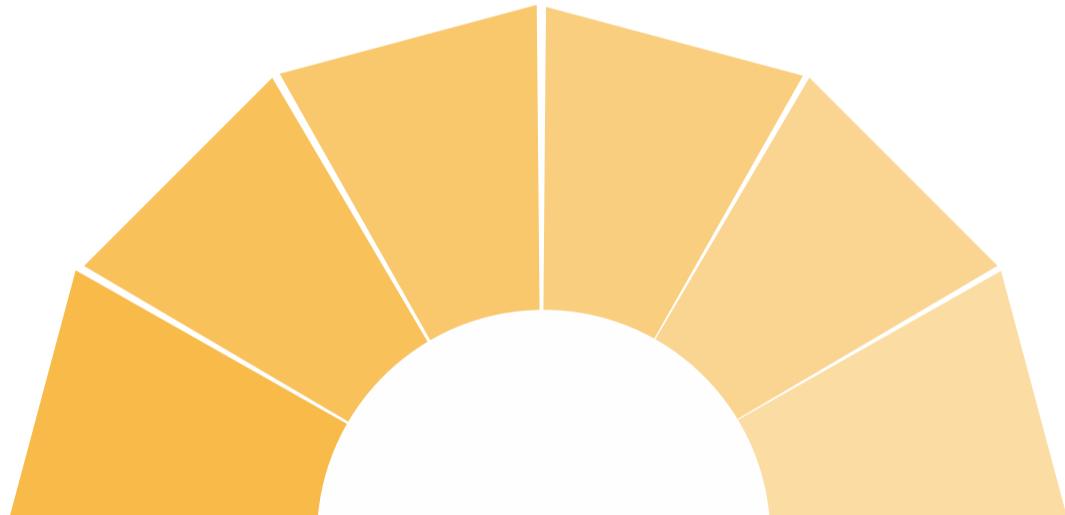

The posts are NOT static, they will change and look dynamic. Like a living wall!

Posts can expand and show controls and stuff.

There are different ways of how to display a post.

CONTROLS

Two radial menus, both controlled via kinect.

One chromatic-coded menu is for inner-widget navigation, color-coded for the current widget

The other is used for general navigation, for example selecting the widgets.

COMBINED
