Widget Positioning Guidelines

|		
Next Widget is always on the upper left side	Active Widget is always displayed on the two center screens	Previous Widget is always on the upper right side
	The further away the widgets are away from focus the smaller they become		The further away the widgets are away from focus the smaller they become	

Abbildung 1: incredibly good example of perfect widget positioning

Pros:

- focused widget is always big enough for suitable usage

- no information loss because other widgets are still displayed

- intuitive because of known UIs that use the same principle (coverflow)

- scalable

Cons:

- in some cases widgets may be displayed twice
